

Fuji Remora Flash

This new flashgun from Fuji is designed for use with Fuji compact cameras in underwater housings but will actually be compatible with almost any camera that has a built-in flash, because it is synchronised by means of a fibre-optic cable. It has an adjustable power output with four different pre-flash settings, a diffuser for wide-angle shots and a useful 42W/sec output. Depth-rated to 55m, the unit is said to give up to 240 flashes per set of four AA batteries, and comes complete with flexible arm, single slot tray and fibre-optic cable. You pay £230.
